Label template for relegendable keycaps

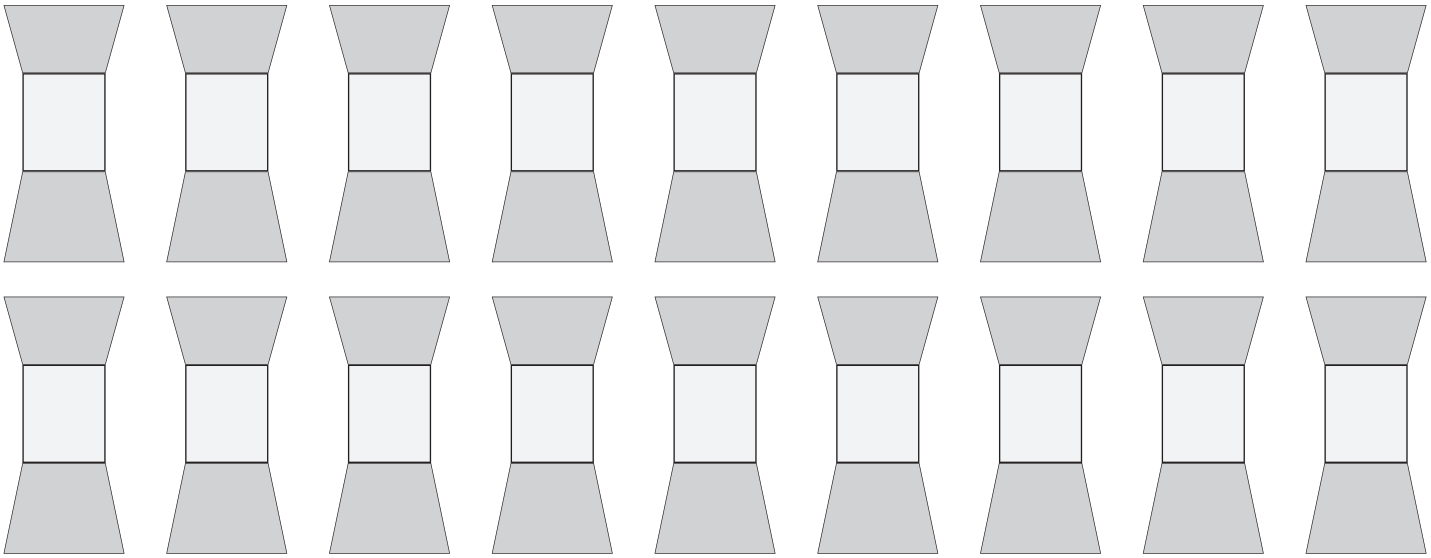

By cyber_engineer (GeekHack)

We recommend printing at actual size (no scaling) on A4 paper using Adobe Illustrator.
If necessary, adjust the scale to match the correct size.

Use the 15mm sample box on the right as a reference — it should measure exactly 15mm with a ruler.
Adjust the print settings until it does, to ensure proper alignment.

Top-and-bottom layout only (This is the standard layout for IBM keycaps)

Layout including both sides as well (This version was specially created)
The black lines on the side represent the keycap clips. Please cut along them before use.
